Project Details

Conductive Labs LLC manufactures a top of the line polyphonic MIDI arpeggiator known as The NDLR and they needed an ink to make their user interface pop. With direction from award winning industrial designer [Nick Oakley](#), Conductive Labs LLC decided that the subtle glitter effect and dark silver of the #764 ink would be fantastic for the NDLR's design aesthetic.

“Due to the success we've had with Color FX ink, we would recommend it for anyone wanting a professional and durable finish for their product.”

- Darryl McGee
 (Conductive Labs LLC)

Customers have often commented on how well designed the final product is. The NDLR was able to move from a crowd-funded project to an industry standout due in part to the effects provided by the beautiful Color FX ink. Stay tuned for future projects from Conductive Labs that may very well use more Color FX / Crescent Bronze inks. Click the contact links to get your hands on “The NDLR”!
